

**Southampton, Hampshire, Isle of Wight and Portsmouth Primary Care Trust Cluster.**

**Additional information requested by the Health Overview & Scrutiny Panel.**

**Map of the UK showing all the proposed centres, numbers of surgeons for each one and their catchment area.**

The table below shows the proposed vascular centres across England and their population area.

<b>Region</b>	<b>Number of Vascular Centres now</b>	<b>Population</b>	<b>Proposed number of 24/7 vascular centres</b>	<b>Potential Number of centres per million population post review</b>
East Midlands	7	4.34	5	1.61
East of England	15	5.73		
London	11	7.62	5	0.65
North East	6	2.58		
North West	17	6.88		
South Central	7	4.06	3	0.73
South East Coast	10	4.32	1 (Sussex), 2 (Surrey)	
West Midlands	11	5.41	1 (Black Country)	
Yorkshire and Humber	11	5.21	7	1.34
South West	13	5.21	Bristol 2 for 1.1 million	
<b>Total</b>	<b>108</b>	<b>51.45</b>		

**The number of practising vascular surgeons in the UK.**

The vascular society report that they have 460 members who are vascular consultants.

**The number of newly qualified surgeons appearing every year.**

It is anticipated that only 20 new trainees will be trained per year over the next few years (source: Standards for Vascular Training, 2011. Edinburgh, Vascular Society of Great Britain and Ireland)

**The size of St Richards Hospital's catchment area.**

Approximately 230,000

**Southampton Hospital's catchment area.**

Under the current provision Southampton General Hospital serves a population of 895,176. Under the proposed standalone model Southampton General Hospital would serve a population of 895,000. Under the proposed network model both Southampton General Hospital and the Queen Alexandra Hospital would serve a population of 1,497,000 across Portsmouth and Southampton.

**The views of the Coastal West Sussex Clinical Commissioning Group.**

Under the standalone model Portsmouth Hospitals NHS Trust could increase the size of population covered if patients in the Chichester area chose the Portsmouth service. However this would require the majority of Chichester patients to choose Queen Alexandra Hospital in order for the minimum population size to be met. The West Sussex Clinical Commissioning Group has confirmed that it cannot be guaranteed that all Chichester patients would choose to go to Queen Alexandra Hospital and therefore the Portsmouth Stand Alone Model will not cover the 800,000 population required to meet the recommended size of population to generate a sufficient volume of activity.

**The number of patients from West Sussex that are referred to QAH.**

Last year two EVAR procedures were carried out at the Queen Alexandra Hospital on patients from West Sussex.
