Please expand on the impact your policy/proposal will have, and how you propose to mitigate any negative impacts?

The development of shore power at the port will allow the port to continue to operate as a port in the face of growing concern over ship emissions to air and allow the port to develop as a major cruise liner destination bringing greater wealth and employment to the City. If we can get all those vessels alongside to use shore power it will improve the ambient air quality in the City and the reduction (particularly of sulphides) will help reduce the damage to old stone buildings.

How are you going to measure/check the impact of your proposal?

Measure fuel not used on-board ship against energy used to power ship from shore and determine Carbon and associated emissions saved.

Please expand on the impact your policy/proposal will have, and how you propose to mitigate any negative impacts?

Unless the port controls and reduces the amount of Carbon that berthed ships produce it will be unable to continue its expansion into the Cruise Liner market which brings jobs and money into the City. The provision of shore power at the berths will enable this. The port remains a bastion of employment in one of the most socially deprived areas of the City supplying high quality jobs for low-skilled labour but also for those wishing to learn, achieve and move up.

Please expand on the impact your policy/proposal will have, and how you propose to mitigate any negative impacts?

The Port is a major business within the City and one that helps the City prosper and grow as a major employer and wealth generator, if the port is able to continue encouraging cruise vessels into Portsmouth then over the next 38 years the proposed development at the port will generate on average £44M per annum to the Portsmouth City Council area. The current proposed development of the cruise liner terminal will help support 2,560 jobs across the UK, 1000 directly, 650 within supply chains and 910 jobs supported by worker's spending.
