The Rights of Way Improvement Plan has been developed to provide access to areas of the city via a network of public rights of way. The proposals outlined aim to encourage active travel, which greatly improves both physical and mental health. This can be seen through the benefits of physical exercise relating to physical wellbeing, but also through the associated benefits of reduced risk of depression, dementia and Alzheimer's (<https://www.sustrans.org.uk/media/4464/4464.pdf>).

How are you going to measure/check the impact of your proposal?

Benefits will be measured by tracking the rates of active travel via rights of way in the city.

The majority of Public Rights of Way routes in Portsmouth are accessible for all, however, there are some that may be considered inaccessible for those whose mobility is limited. The physical nature of these routes may mean that it will not be possible to make it as fully accessible for all.

However, some path infrastructure, such as stiles and gates, can be addressed to remove any disparities in access caused by infrastructure.

How are you going to measure/check the impact of your proposal?

An audit of the Rights of Way network has taken place to assess accessibility, amongst other elements. Work is currently underway to determine where improvements can be made.

Where new routes are proposed. access arrangements will be determined that consider the need for all users.

By maintaining and ensuring public access to rights of way in the city we are promoting a viable alternative to motorised transport. Evidence has found that through lifestyle changes to more active modes there is a significant reduction in carbon output per capita, particularly if trips are considered for business or social and leisure trips (<https://www.sciencedirect.com/science/article/abs/pii/S0959378021000030>).

How are you going to measure/check the impact of your proposal?

Through a network of maintained public rights of way, the Council are providing viable opportunities to promote active travel and reduce the dependency on motorised vehicles for trips throughout the city. If this is well maintained it encourages active travel, providing long-term and sustainable improvements to air quality.
