Appendix 3 - <u>**Summary of seawater sampling undertaken by Regulatory Services**</u>

Sample Locations -

Weekly samples at:

- Sample point A - Environment Agency monitoring point for Southsea East
- Sample point B - East of South Parade Pier
- Sample point C - East (+1) of Southsea Pier
- Sample point D - East (+2) of Southsea Pier

Additional sampling at point 1 (Opposite Southsea Common) from October onwards -

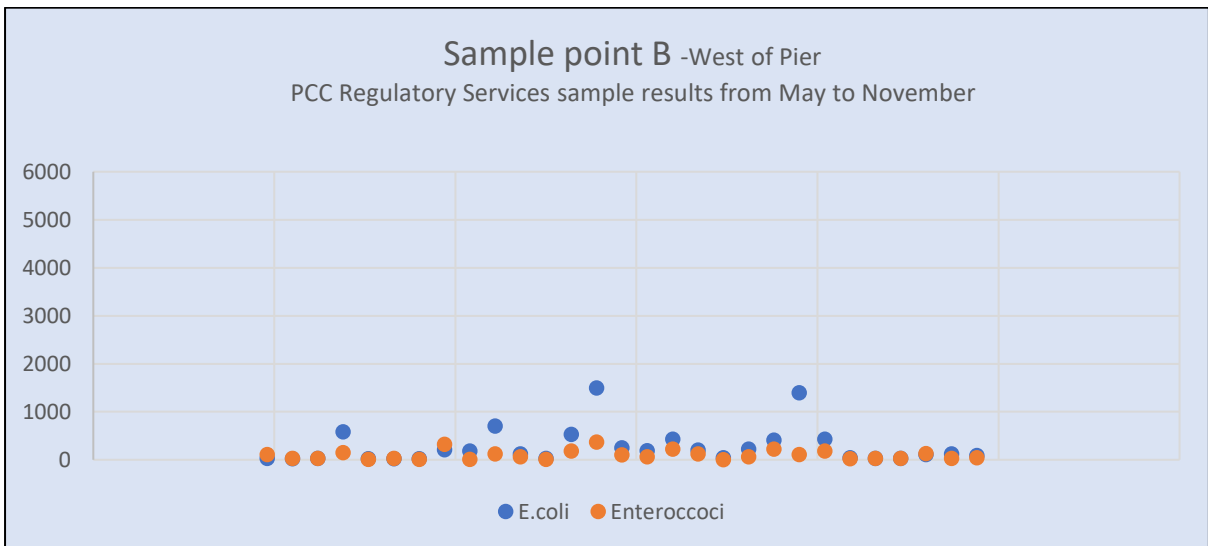

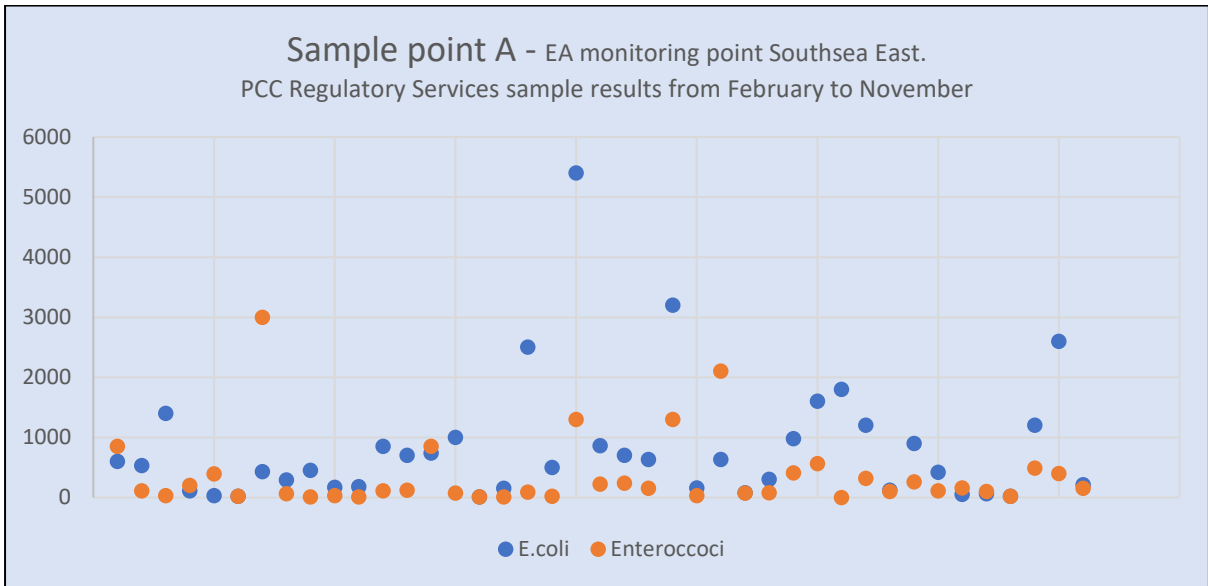

In addition, monthly samples obtained by vessel (used for the sampling of shellfish for classification purposes). One sample from Portsmouth Harbour and two from Langstone harbour each month.
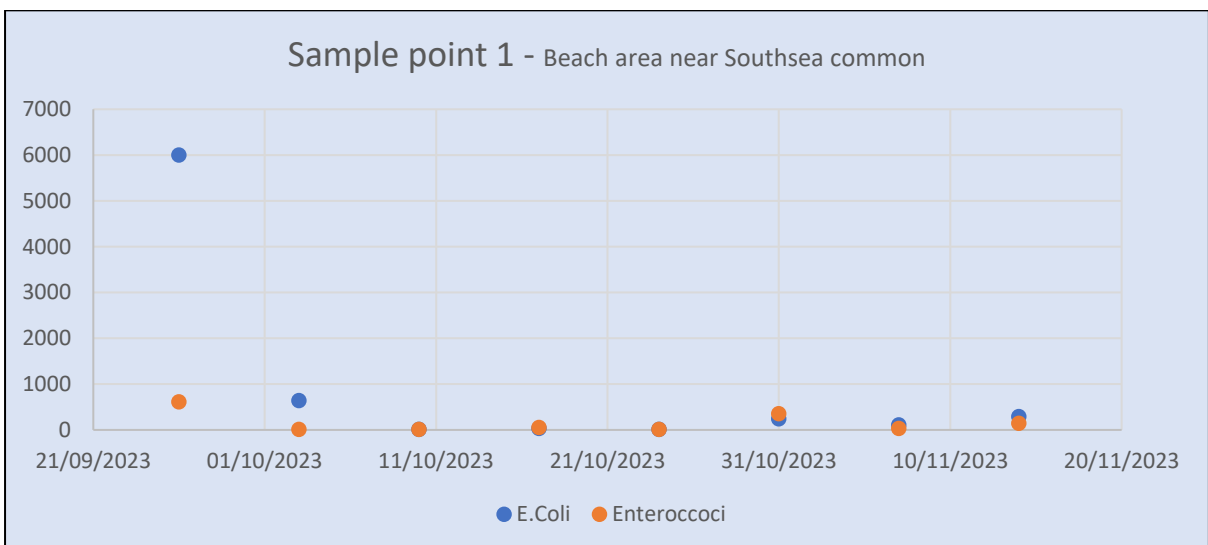

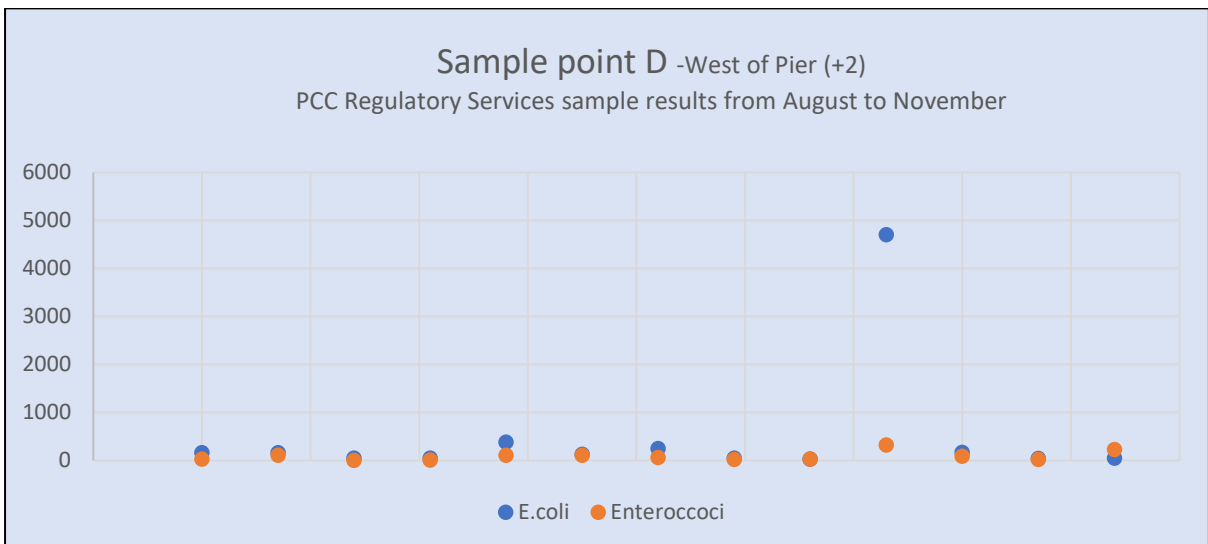

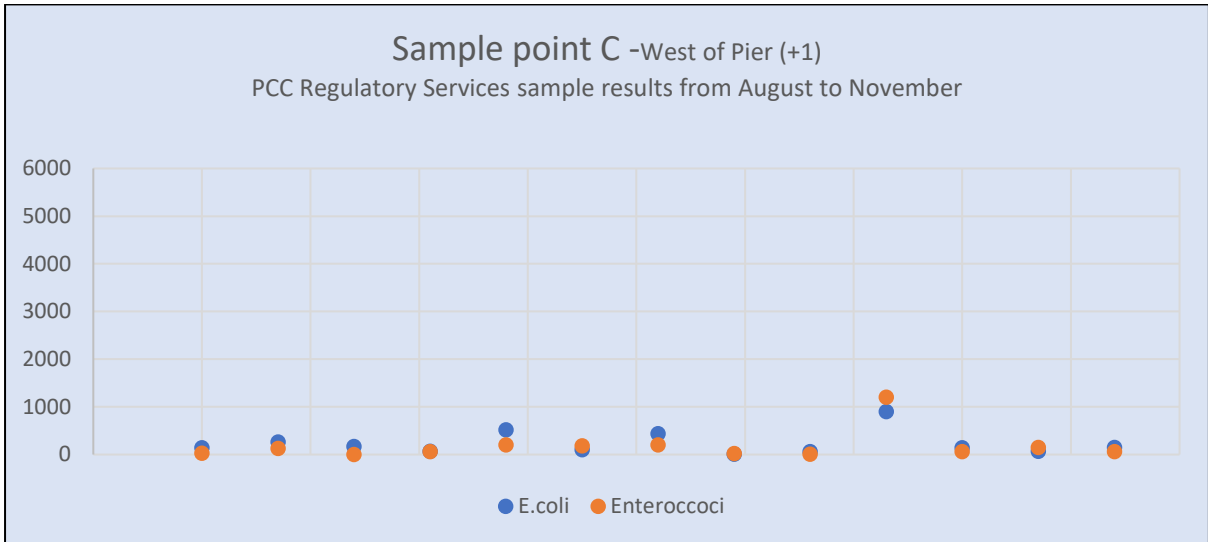

Bathing water classification criteria -

Classification	Criteria - Calculated statistically with 4 years sampling results
Excellent	E. coli ≤250 cfu/100ml Enterococci ≤100 cfu/100ml
Good	E. coli ≤500 cfu/100ml Enterococci ≤200 cfu/100ml
Sufficient	E. coli ≤500 cfu/100ml Enterococci ≤185 cfu/100ml
Poor	The values are worse than the sufficient

Appendix 3 - Summary of seawater sampling undertaken by Regulatory Services

Results summary

Sample point A - EA monitoring point Southsea East.
PCC Regulatory Services sample results from February to November

Sample point B -West of Pier
PCC Regulatory Services sample results from May to November

Appendix 3 - __Summary of seawater sampling undertaken by Regulatory Services__

Sample point C -West of Pier (+1)
PCC Regulatory Services sample results from August to November

Sample point D -West of Pier (+2)
PCC Regulatory Services sample results from August to November

Sample point 1 - Beach area near Southsea common

Appendix 3 - Summary of seawater sampling undertaken by Regulatory Services

Portsmouth Harbour - April to November
Monthly samples obtained from contracted vessel used for shellfish sampling

● E.Coli   ● Enteroccoci

Langstone Harbour - February to September
Two samples per month obtained from contracted vessel used for shellfish sampling

● E.Coli   ● Enteroccoci
